

FAQ:

1. 新挖出的币在 200 个块以后才可以用, 大概 10 小时
2. 永远不需要抵押
3. 目前是主网的 pre-mainnet 阶段,不是测试网,但是有抗矿霸算法
4. 可以边 p 边挖
5. 红框填你的 plot id, 绿框填生成 plot id 的 7 开头的地址, 蓝框填你的 plot 文件目录

```
-----
# NEVER POST YOUR CONFIG.YAML INCLUDING YOUR PASSPHRASE TO ANY BOARD OR CHAT!
account_id to miner addr: [redacted] : [green] # define accounts and pub key addr for s
plot dirs:
- [blue]
# - 'C:\second\windows\plot\dir'
# - '/first/linux/plot/dir'
# - '/second/linux/plot/dir'
```

6. 这个提示说明开始正常挖矿了, 只是这次提交的 deadline 不够小, 不会爆块而已:

```
code: 0
message: {"result":{"accept":false,"reject_info":"larger than current candidate deadline or deadline inconformit
y"},"error":null,"id":"rminer"}
16:21:28 [INFO] round finished: roundtime=13236ms, speed=58.02MiB/s B/s
```
